Abelard to Apple Richard A. Demillo  
2011-08-26 How institutions of higher learning can rescue themselves from irrelevance and marginalization in the age of iTunes U and YouTube EDU. The vast majority of American college students attend two thousand or so private and public institutions that might be described as the Middle-reputable educational institutions, but not considered equal to the elite and entrenched upper echelon of the Ivy League and other prestigious schools. Richard DeMillo has a warning for these colleges and universities in the Middle: If you do not change, you are heading for irrelevance and marginalization. In Abelard to Apple, DeMillo argues that these institutions, clinging precariously to a centuries-old model of higher education, are ignoring the social, historical, and economic forces at work in today's world. In the age of iTunes, open source software, and

for-profit online universities, there are new rules for higher education. DeMillo, who has spent years in both academia and in industry, explains how higher education arrived at its current parlous state and offers a road map for the twenty-first century. He describes the evolving model for higher education, from European universities based on a medieval model to American land-grant colleges to Apple's iTunes U and MIT's OpenCourseWare. He offers ten rules to help colleges reinvent themselves (including "Don't romanticize your weaknesses") and argues for a focus on teaching undergraduates. DeMillo's message—for colleges and universities, students, alumni, parents, employers, and politicians—is that any college or university can change course if it defines a compelling value proposition (one not based in "institutional envy" of Harvard and Berkeley) and imagines an institution

that delivers it.

Beyond 2.0 Steve Collins 2014 The music industry, as with most other media forms, is in the middle of a period of enormous transformation. Digital technologies have empowered producers and consumers of music traditional ways of making and distributing music are under threat as musicians and their audiences embrace new opportunities, many of which bypass the incumbent middlemen. Whilst it is clear that the music industry is thriving, the traditional recording industry, dominated by a handful of multinational corporations is struggling to stay relevant. The changes are so dramatic that the term Music 2.0 has become commonly used to delineate old and new business models and approaches. But the demise of the traditional music industry is overstating things the reality is that (whilst their profits may be diminishing) they still dominate a multi-billion dollar marketplace and

exercise unprecedented control over the star-making process. And, of course, they have the resources to be able to reinvent themselves. The actual future of music is a complex and contested one. This book aims to unpack that complexity, map the changes and explain the causes and motivations surrounding an industry undergoing change. It explores the world of popular music from three distinct perspectives. Firstly, it examines the new opportunities available to consumers of music interrogating how the lines between production and consumption are blurring, creating fans who do much more than just listen to music. Secondly, it draws on interviews with a diverse range of musicians explaining their place in the brave new world and trying to articulate their newly defined roles. Finally, it examines the industry itself, and unpack the responses to current challenges from new and old players

alike.
